

Causes

A painful eye can be caused by:

- **Eye injuries or trauma**
- **Something stuck in the eye** - e.g. a grass seed or a dog's claw!
- **An eye ulcer** - a wound on the surface of the eye that causes pain, discharge, inflammation and redness.
- **An eye infection (conjunctivitis)** - causing inflammation, itching and discharge.
- **Glaucoma** - increased pressure in the eye. Glaucoma is extremely painful and causes eyes to become red, cloudy and bigger than normal.
- **Eyelash disorders** - eyelashes growing in the wrong place or direction often cause redness, swelling, excessive blinking and pain.
- **Eyelid disorders** - inward or outward turning eyelids can cause inflammation, pain and infections.
- **Something irritating** - such as smoke, dust, sand, wind and chemicals.
- **An allergic reaction** - often causes severe swelling around the eyes and in other parts of the body.
- **Uveitis** - inflammation of structures inside the eye.

When to contact your vet

Make an appointment with your vet ASAP if you notice your dog blinking more than usual or think they may have painful eyes. Left untreated, the problem could become much worse. You know your dog best - contact your vet if you're concerned. **Find out whether you are eligible for free or low cost PDSA veterinary treatment using our checker below or visit www.pdsa.org.uk/eligibility**
